The LadderMat Ladder Leveller

Ladders can be a problem on sloping or uneven ground - how do you climb up to clean the windows, clear the gutters, or paint without toppling to one side? Or on a smooth surface, how do you stop the ladder feet from sliding away from the wall or sinking into soft ground? LadderMat can provide the solution to all of these.

Four mats, made from heavy duty rubber matting with nodules, are linked by a sturdy metal loop and offers adjustable anti-slip blocking to go under the ladder foot needing extra height. Or can be put under both feet to reduce to the risk of slipping or of sinking into soft ground.
