The LadderMate

LadderMate is an innovative ladder safety product used by many of the world's leading companies who use access equipment.

Simple in design, inexpensive, but incredibly safe, it has been responsible for avoiding many accidents, some of which could have been fatal.

LadderMate attaches easily and quickly to the base of your ladder and prevents the ladder sliding down the wall. As you can see by the picture on the right the ladder is still perfectly safe even when wheels are attached to the bottom of the stiles!

To create a safety system **LadderMate** can be used in conjunction with [Topmate](#).

Wheels on photo are for demonstration purposes only
