The Ladder Step

Working for long periods on a ladder leads to aching painful feet and in many cases can cause permanent foot arch damage.

The Step fits ladders with a tread rise of between 250mm and 300mm in increments of 12mm. It's constructed from lightweight aluminium and features a secure checker plate pattern to stand on.

With body weight correctly positioned on the Step less strain is placed on the legs and lower back, retaining balance. This in turn reduces fatigue and stress, allowing the use of both hands to operate equipment safely.
